1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-2 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, lines 3 and 3-4, "a first and second slit" is indefinite, as such fails to clearly distinguish two individual slits, but rather a single "first and second" slit. In line 4, "first and second opening" is indefinite as to defining two openings. In lines 7-8, "to maintain the substantially perpendicular suture/pledget orientation" is indefinite, as no pledget is positively defined so as to provide any actual orientation between a suture and a pledget. Also, the meaning of "suture/pledget" is indefinite as to the intended relationship of a suture to a pledget.

In claim 2, lines 1-2, "the first and second slit are" is ungrammatical, as no plural is defined by "first and second slit".

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Erickson (3,819,039). Claims 1-2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Zatarga (5,582,288). Each discloses an apparatus inherently capable of fixating a suture in a substantially perpendicular orientation relative to a pledget, the structure claimed comprising a block (10; 18; respectively) having first and second slits (any two of 22-25; 42, 44) to engage a portion of a first end portion of a suture (at or near 13; 12 at 18) and at least a portion of a second end of the suture (at or near 14; 12 at 18 in the Figure) so as to maintain a suture and pledget orientation should a suture and pledget be secured thereto. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

As to claim 2, each discloses the at least one slit capable of maintaining a parallel relationship between end portions of the suture (the end portions being arbitrary; see the Figure at 18).

As to claim 4, each discloses a first face (15; shown upper side), a second face (16; shown lower side) and a top face (11; containing the slits).

5. Applicant's arguments filed September 1, 2005 have been fully considered but they are not persuasive. Since claims 1-2 and 4 do not include a suture nor a pledget, but encompass structures absent a suture and pledget that could so act, the arguments

relative to an arrangement and structure of the pledget and suture are not convincing. Furthermore, Zatarga discloses a suture (12) and a pledget (32) as claimed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shown are packages including sutures and pledgets together.
